AquaRun Platform

SYSTEM CHANGELOG & ARCHITECTURE REPORT

Branch: rider-remittance-and-role-fixes

Release: Version 2.0.4
Date: October 26, 2026

1. Executive Summary

This release solidifies core operational workflows across all four platform roles (**Customer**, **Rider**, **Staff**, and **Admin**), resolves cash remittance accountability for past and current deliveries, streamlines gallon refill versus empty container cataloging, and addresses UI stability and professional aesthetic standards.

Key New Capabilities

- **Rider Remittance:** 1-click cash turnover button and itemized order modal on dashboard and history.
- **Staff Remittance Oversight:** Station cashier can verify and accept cash collections per rider.
- **Strict Two-Category Focus:** Purged accessories; dedicated strictly to Water Refills (Swap) and Empty Containers.
- **3-Way Pricing Sync:** Swap Price + Empty Price = New Gallon Price calculated dynamically.

User Experience & Stability

- **Zero Emojis:** Replaced all emojis across customer, rider, staff, and admin with professional SVGs and badges.
- **Scrollbar Shift Fix:** Fixed layout shift when switching between long and short tables via stable scrollbar gutters.
- **Delivery Attempt & Reschedule:** Riders can log unreachable customers; customers can reschedule directly.
- **Double-Swap Guard:** Active pending orders reserve empty container slots, preventing ledger overdrafts.

2. Role-by-Role Feature & Workflow Upgrades

A. Rider Operations

- **Cash in Hand Card & Remittance Modal (`my-deliveries.js` & `delivery-history.js`):** Delivered cash collections are calculated from all completed COD orders assigned to the rider. Riders now have an active button: `Turn over & remit cash (₱XX.XX) →`. Clicking opens a modal detailing each order's number, customer name, date, and collected cash, with a confirmation button to clear the balance upon handing money to the cashier.
- **Legacy Delivery Remittance Inclusion:** Deliveries completed before the remittance function existed are dynamically captured and made eligible for turnover, ensuring old balances do not remain stranded on rider profiles.
- **Delivery Issue Reporting (`delivery-details.js`):** If a customer is not home or unreachable, riders can click `Cannot Deliver / Report Issue`. This transitions the order to `attempted` with a logged reason rather than stranding it in transit.
- **1-to-1 Swap Auto-Count (`complete-delivery.js`):** Strict enforcement of the 1-to-1 swap rule: filled bottles delivered and empties collected are prefilled automatically from the verified order items and customer container balance.

B. Staff & Cashier Hub

- **Rider Remittance Clearance Tab (`staff/orders.html` & `staff/orders.js`):** Added a dedicated Remittance sub-tab grouping active riders, showing their unremitted COD cash in hand and number of completed orders. Staff can click `Acknowledge & Accept Cash` upon physical turnover, immediately reconciling station ledgers.

- **Delivery Slot Adjustment & Batching:** Staff can adjust time slots and dispatch batches sorted by geographical route proximity from the station hub.

C. Customer Experience

- **Streamlined Ordering Flow (`new-order.js`):** Customers select their preferred refill. The system automatically inspects their container balance:
  - If they hold empty containers, the swap price (e.g. ₱25.00) is applied automatically.
  - If they exceed their container hold or are first-time buyers, the system defaults to Water + New Gallon (e.g. ₱150.00).
  - Customers can also purchase spare empty containers outright (e.g. ₱125.00).
- **Double-Swap Protection:** Active pending or confirmed orders reserve the customer's containers so they cannot submit simultaneous swap orders exceeding their physical bottle count.
- **Clean Separation of Tracking & History:** `track-order.html` is dedicated exclusively to in-flight orders. Past orders are housed in `order-history.html` with status filters (`All`, `Active`, `Completed`, `Cancelled`) and an itemized receipt modal.

D. Admin Management

- **Two-Category Product Manager (`admin/products.js`):** Clean segmented selector: `Water Refill (with Swap)` and `Empty Container Only`. All emoji references and accessory tabs have been eliminated.
- **Synchronized Gallon Pricing Calculator:** Editing the Swap Refill Price (e.g. ₱25.00) or Empty Container Price (e.g. ₱125.00) immediately syncs the New Gallon Price (₱150.00) in real time.
- **Integrated Image Cropper:** Built-in 1:1 square cropper with pan/zoom and fit/fill modes for crisp product photos without external dependencies.

3. Database Migrations & SQL Upgrades

FILE	TARGET	KEY FUNCTIONS & SCHEMA CHANGES
`sql/09_station_location_and_address_coords.sql`	`settings`, `addresses`	Stores station hub GPS coordinates; adds latitude/longitude to addresses; enables proximity route sequencing.
`sql/10_remittance_attempted_and_empty_containers.sql`	`orders`, `products`, RPC	• Adds `attempted` to `order_status` enum. • Adds `rider_remitted`, `remitted_at`, and `delivery_attempt_reason` columns. • Creates `accept_rider_remittance(p_rider_id)` security definer function. • Creates `record_delivery_attempt` and `reschedule_attempted_order`. • Seeds Empty 5-Gallon Container products (₱125.00). • Adds update RLS policy on `orders` for staff, admin, and assigned riders.

Database Action Required

Run `sql/10_remittance_attempted_and_empty_containers.sql` in your **Supabase SQL Editor**. While the client code includes table-level fallbacks, this script installs the secure RPC functions and enum types for complete reliability.

4. Core Files Modified & Added

FILE PATH	TYPE	DESCRIPTION OF CHANGES
`js/pages/rider/my-deliveries.js`	Modified	Added interactive cash remittance turnover button, modal breakdown, and balance reset handler.
`js/pages/rider/delivery-history.js`	Modified	Added Cash in Hand card with remittance modal and filter tabs.
`js/services/ordersService.js`	Modified	Updated remittance summary query for delivered/completed orders; added `staffAcceptRiderRemittance` & `riderRemitCash`.
`js/pages/staff/orders.js`	Modified	Added staff Remittance tab with rider cluster breakdown and cashier cash acknowledgment.
`js/pages/admin/products.js`	Modified	Removed accessories tab and emojis; implemented 2-category refill/empty model with 3-way price sync.
`css/base/reset.css`	Modified	Added `scrollbar-gutter: stable;` and styled scrollbars to eliminate layout jump.
`sql/10_...sql`	New	Complete migration script for remittance, delivery attempts, and empty containers.
